

Aircode™ improves horses living quarters

After reaching success on several high profiled markets, Aircode™ have recently made a huge impact in the world of horses.

With easy installations and low energy use Aircode manage to raise the indoor air climate within horse stables and horse transportation to the point where horses feel better, recover quicker and is much less likely to catch bugs and deceases. Aircode prevent the horses from inhaling bacteria's, ammoniac and other airborne particles that affect their immune system negatively.

"Even before the first installation was done I was confident that the horse stables/ transports would be greatly benefited by using Aircode products, since horses environment are extremely exposed by particles, VOC's, and bacteria's, some of Aircode's easiest opponents to combat. Due to that knowledge it hasn't been a real surprise but yet as rewarding to hear the customers reactions and the horses response and minimized days were they are ill or sick. Despite if the customer is an Professionals horse jumper / trainer, stable owner or an horse owner they have all noticed a great improvement within the stables."

(Mats Nilsson, Aircode Owner)

Stand Alone Unit

In-duct installation

Mark Bunting from outside Birmingham, UK, a professional horse jumper and trainer has taken the Aircode system to his heart. He states that since using Aircode performance of the horses have increased considerably. After heavy exercise they re-energize much quicker and they haven't picked up any bugs or deceases since the units were installed. The indoor environment is completely changed and I know that the horses have the best ambient atmosphere possible.

Everything you need is on www.markbuntinghorses.com

Aircode can be easily installed within stables either with our stand alone units or a retro fit within existing ventilation system. Both alternatives are easy to install and the units has an energy consumption of a light-bulb.
