

Aircode™ can now even be found on the dance floor!

Aircode™, which has established itself as a strong brand both in Sweden and abroad, has now reached the restaurant sector with its successful environmental solution for clean air. The Aircode™ technology creates an indoor environment characterised by clean air that is free from odours, particles and bacteria, all in an effective and energy-efficient manner. Regardless of the area of application, Aircode purifies the air in a short space of time, and is a good friend of asthmatics and those with allergies.

Clean, fresh air is something that is now demanded and highly valued by both customers and staff. Magnus Nystrand, manager of one of many Harry's restaurants, says:

"After installing Aircode™, we have received extremely positive feedback from people, in particular people with asthma problems, who say that the indoor air at Harry's is unique for the sector."

The Aircode technology is not only a revolutionarily simple solution to ventilation problems, but is also very energy-efficient. By installing Aircode™ in their premises instead of extensive, costly interventions, customers have saved thousands of kronor.

A visit to the restaurant is a complete experience

The Swedish-owned company Harry's has entered into a collaboration with Aircode. A visit to the restaurant is a complete experience, and this is where Aircode comes into the picture. For visitors, it is essential for the air they breathe to be fresh and odour-free, as the restaurant is open all day.

Magnus Nystrand has installed Aircode™ at the entrance, by the large dance floor, as well as in the main bar, and has noticed a considerable difference. He says:

"A fresh indoor environment creates a better and healthier working environment, which generates a more pleasant stay for our customers and staff.

"Fresh air also provides a more luxurious atmosphere and improves the experience. Our customers have noticed the improved air in the premises and are very satisfied with the results.

"Aircode™ is a simple, versatile solution that produces an impressively large effect. We are extremely satisfied," concludes Magnus Nystrand.

Dust Particle Decay

Environmental goals

- Particle reduction
- Fresh toilet environment
- Odour elimination
- Bacteria elimination
- Fresher environment
- Healthier environment

Aircode™ CX-100

A self-contained, stainless steel unit that can easily be installed in the ceiling or the wall with four screws and a plug connector.

The CX-100 creates a fresher climate in waste disposal rooms, areas for returnable glass, beer stores, changing-rooms and other closed areas.

The unit eliminates odours, bacteria, airborne microbes, gases, mould and fungal spores.

Aircode™ ID AC-550

The Aircode ID 500 is an ionisation unit for installation in ventilation ducts. The unit creates a clean indoor climate in industrial facilities as well as in commercial buildings and public premises.

The unit eliminates odours, bacteria, airborne microbes, gases, mould and fungal spores.
